

**Feasibility Study Report
Of
Jammer Approval & Monitoring System
(JAMS)**

Revision number: 01

Issue number: 01

Revision date: 06/08/2026

Created By:	Rohit Kumar Scientist 'B'	Created Date:	05/08/2026
Reviewed By:	Sangeeta Manish DDG	Reviewed Date:	06/08/2026
Approved By:			

Background

The Office of Secretary (Security) presently grants permission to statutory/Government recognized examination conducting bodies for deployment of low-powered/classroom jammers during examinations. The existing process is manual and involves submission of requests, scrutiny, approval, issuance of permission orders and communication with concerned agencies. A secure web-based portal is proposed to digitize this process.

Objective:

- Digitize the permission process.
- Online onboarding of examination conducting bodies.
- Electronic submission and tracking of jammer deployment requests.
- Automated approval workflow and permission order generation.
- Centralized records and MIS reports.
- Reduce processing time and improve transparency.
- TimeLine of Application with remarks
- Automated tracking, email reminder services to applicants and processing officers for timely submission, scrutiny, approval, and disposal of jammer deployment requests.
- Deployment calendar to track the **dates on which jammer deployment has been approved for examination conducting organizations**, enabling effective monitoring of overlapping deployment schedules and efficient resource planning

Project Scope:

- Phase-I: Online onboarding of organizations, Role Based Access Control, Backend development and user login creation, application submission for deployment permissions, workflow-based approvals, permission order generation, dashboard and Basic reports, Mail/SMS notifications and reminders, calendar to track the dates of jammer deployment on dashboard, Timeline of Application with remarks, Audit Trail, File Upload, Excel Upload, PDF Generation.
- Phase-II: NIC eSign integration, DSC Integration, UGC verification and Advanced Reporting.

☐ Adequate arrangement

☐ Each and every jammer accounted

☐ Do not interfere with mobile communication

Submit

Submission progress

Form completeness **0%**

- Fill the application**
Organisation, examination, vendor and declarations.
- PDF generated**
A government-format application PDF is generated on submit.
- Sign the PDF**
Download, get it signed by the authorised signatory.
- Upload signed PDF**
Upload to send the file for Dealing Hand verification.

Before you submit

Keep the sanction letter, examination schedule and vendor jammer specifications ready in PDF or Excel format.

On submission the system generates the application in government letter format. Download it, obtain the authorised signature, and upload the signed copy – the file then moves to the Dealing Hand.

Jammer models must be from the approved vendor list of the Wing.

Fig 1

Step-1

Organization nodal officer will fill form as in figure 1. Then Application letter will be generated which needs to be signed and uploaded by Organization Nodal Officer. In case of Multiple Examinations, Organization Nodal officer can upload excel in format as decided. After form fill up, screen will look like as per below image to upload signed and stamped PDF.

Jammer Allocation & Monitoring System (JAMS) End-to-End Process Flow

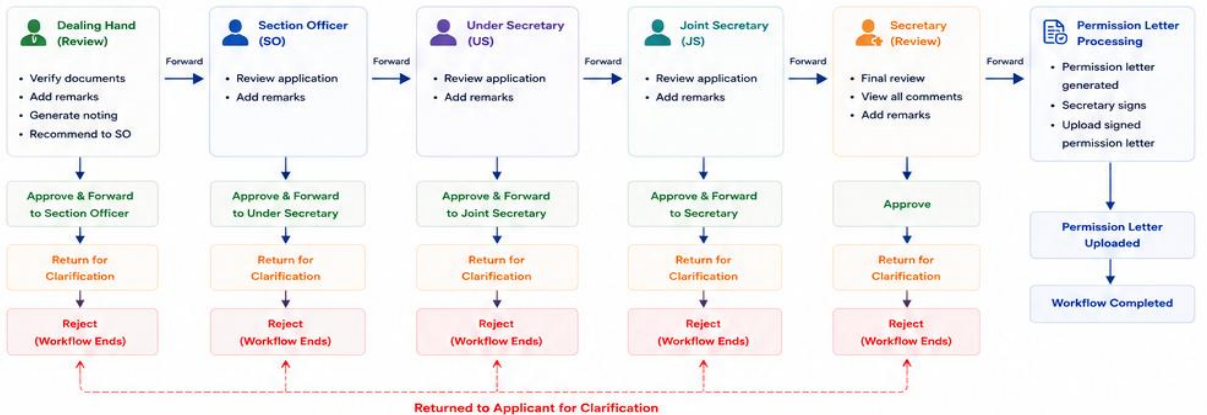

1. USER REGISTRATION & ACTIVATION

2. APPLICATION SUBMISSION BY ORGANIZATION USER

3. DEPARTMENTAL APPROVAL WORKFLOW

4. FINAL APPROVAL & PERMISSION LETTER GENERATION

5. DELIVERY TO ORGANIZATION USER

6. TIMELINE & AUDIT TRAIL

7. NOTIFICATIONS

8. DOCUMENT MANAGEMENT

KEY BENEFITS

Technology Stack:

- Frontend: HTML5, CSS5, Bootstrap, JavaScript
- Backend: PHP 8.4
- Database: MySQL 8
- Web Server: Apache on Linux (RHEL/Ubuntu)

Technical Feasibility:

The project is technically feasible using existing Government infrastructure and open-source technologies. However, URL and No-reply or support mail needs to be created and whitelisted for using mail features.

Operational Feasibility:

The proposed system aligns with the existing manual workflow and requires minimal changes in administrative procedures. It will improve efficiency, reduce paperwork, and provide end-to-end digital tracking.

Economic Feasibility:

The project can be developed using open-source technologies (PHP, MySQL, Apache), minimizing software licensing costs. Existing Government infrastructure and hosting facilities can be utilized, resulting in a very low cost-effective solution. **However, cost for SMS and Esign need to be borne by Cabinet Secretariat.**

Schedule Feasibility:

Phase	Duration
Requirement Study	1 Weeks
Phase-I Development	12 Weeks
Testing	1 Weeks
User Acceptance Testing	1 Weeks
Production Deployment	1 Week

This Schedule is Tentative after approval of this document. Phase 2 work will begin after Completion of Phase 1.

*NOTE- All webportal design images are tentative in nature and may change in future as per the requirements.
